

## Electric Boom Lift Attachment

Electric Boom Lift Attachments - The most common designation used for electric trucks are the type "E" meaning the forklifts meets the minimum requirements for electrical hazards and fire. The trucks which are described as type E are not suitable for use in hazardous areas. Type "ES" lift trucks meet all the requirements of Type "E" forklifts and have other tools in order to stop the emission of sparks and control the surface temperature of lift truck parts.

Type "ES" forklifts are more specialized and are not commonly found in the marketplace. Type "EE" trucks meet all the standards of Type "E" and "ES" trucks and have all electric motors and spark generating electrical parts fully enclosed as Type "EE" trucks are generally used wherever a hazardous location has been identified. Type "EX" lift trucks are specially meant for use in environments where flammable fibers or dust or vapors can be existing. These lift trucks are made using no spark producing components together with different protective measures to be able to guarantee optimum safety in the risky applications they can be used for.
