

Parts for Order Picker Forklift

Parts for Order Picker Forklifts - Order picking is otherwise known as order preparation operation. This is among the chief processes in a warehouse and consists of people known as order pickers, taking and collecting articles in a specific quantity prior to shipment in order to fulfill customer orders. Order picking is a basic warehousing method. The effectiveness in which this particular job is done could be directly linked to a supply chain's productivity. Hence, order picking is among the most controlled logistic methods. Order picking falls within the category of the warehouse management system.

There are certain kinds of order picking which include: pick to box method, wave picking method, picker to part method or piece picking, zone picking method and sorting systems method.

The pick to box method comprises the order picker filling the box with the stuff from her or his station. The box then moves to the other picking locations until the client order is complete. In this particular technique, there is no movement of the order picker workers. In the wave picking method, the order pickers move around so as to gather the required products for numerous orders. The picker to part method or piece picking is similar where the order pickers or picker move to collect the items required but for one order only.

There is no movement by the order picker in the sorting systems method. Rather, stuff are delivered to the orderpicker by an automatic system like a conveyor system or an automatic storage system. In the zone picking method, each and every order picker is assigned to one particular zone. They are responsible for just realizing order picking within this specified zone.
